

A background image of a warehouse interior. A woman with long blonde hair, wearing a light blue long-sleeved shirt and dark pants, is standing on a metal walkway. She is looking down at a red bin filled with boxes. In the background, there is a curved conveyor belt system with several boxes on it. The floor is made of metal grates. The overall scene is brightly lit, typical of a warehouse environment.

Warehouse Series

Edition Comparison

Software that grows with you

CHOOSE THE EDITION THAT MEETS YOUR NEEDS

Momentum is building in the warehouse. It is one of the few places in a business where return on investment can actually be calculated by using metrics such as reduced shipping errors, improved efficiency, lower compliance issues, increased labor utilization and reduced stock waste.

So, if the argument for automating your warehouse is so compelling, where do you start? Economic conditions dictate caution. Smart money would suggest that you invest in a product that can start small and allow you to grow the solution along with your business.

By offering three editions designed to address needs at all levels, Accellos One Warehouse gives you that flexibility.

- Collect Edition - aimed at the company looking to extend their paper processes to the wireless world
- Manage Edition - built for the organization that is looking for a limited amount of system direction but plans for growth
- Fulfill Edition - designed for the more sophisticated user that needs more control, automation and flexibility in their warehouse

Invest in those features and capabilities that benefit your business today safe in the knowledge that you can extend the functionality to address the most challenging requirements a warehouse can present.

“Top performers have already built-out their inventory control and order picking processes, and are now turning to innovations in put-away, replenishment, and returns processing to stand-out above the competition.”

Ian Hobkirk, Aberdeen Research

Capabilities for even the most demanding warehouse...

OPTIONAL MODULES for Manage and Fulfill

- Order Consolidation
