

Jet Enterprise Boosts Revenues for Wholesale Distributor Kinsey's Archery

Fast. Accurate. Anywhere.

A leading wholesale distributor of hunting and outdoor-related equipment, Kinsey's Archery Products, Inc. has served thousands of customers around the world for over 50 years. With over 13,000 inventory items, 100 employees and over \$50 million in revenue, this seasoned company is leveraging their business data to capture new growth—32% since implementing Jet Enterprise. Systems Administrator Mat Ealy shares how Kinsey's Archery fully implemented Jet Enterprise in just two weeks, laying a robust framework for future company success.

After purchasing a Microsoft Dynamics® NAV system a couple of years ago, the technical team at Kinsey's Archery couldn't find an easy way to report on the many key performance indicators (KPIs) the company needed to track. To help improve on Microsoft Dynamic's stock reporting functionality, Kinsey's Archery implemented Jet Professional, the reporting solution from Jet Reports. While Jet Professional successfully met their reporting needs, they found they wanted to dive even deeper into analytics and soon upgraded to Jet Enterprise, Jet Reports' robust and easy-to-use corporate analytics and reporting platform.

“Before Business Intelligence, there was no way for employees to react in any actionable timeframe.

Now with Jet Enterprise, they can react very quickly.”

- Mat Ealy
Kinsey's Archery

The Challenge

High demand for report queries taxed the company's IT team and slowed down business

Although the company was benefiting from the additional reporting capabilities of Jet Professional, some of the more data-intensive reports required custom queries from a SQL production database, which turned out to be a very lengthy exercise. With just two employees in the IT department and more report requests than they could handle, it became apparent that to get better data insights in a more timely manner, something else was needed.

Before Jet Enterprise, the IT staff was not able to write all of the reports that business users needed, and internal requests for reports didn't always communicate the right information, further slowing development time, according to Kinsey's systems administrator Mat Ealy. At one point, the IT department was spending 20 hours per week writing reports in Jet Professional and SQL—a tall order for their two-person team.

The Solution

Empower business users to write their own reports and free up IT resources with Jet Enterprise

After learning about Jet Enterprise, the business intelligence solution from Jet Reports, Kinsey's Archery decided to upgrade. With the help of their Microsoft Dynamics partner, iCepts, Kinsey's has empowered business users to write their own reports and freed up IT's time to pursue strategic initiatives. They also realized the data warehouse and cubes in Jet Enterprise would equate to improved reporting and server performance.

Upon making the decision to upgrade, Kinsey's Archery installed Jet Enterprise in just two hours and had the sales team writing reports over the next two weeks.

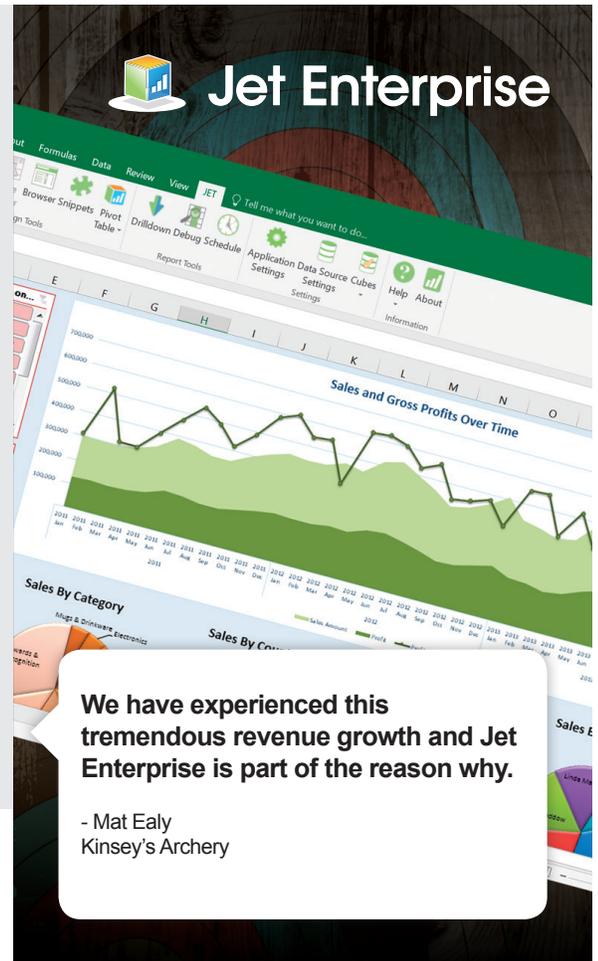

"Our technical team attended a webinar on the Jet Data Manager and a second webinar on report writing from Jet Reports," said Ealy. "We gave our sales department a 30-minute training session in week two of implementation, and we had them writing their own reports."

The Results

Superior access to information improves agility in all departments

"Before BI, it was 'I think, I feel, I believe,'" said Ealy. "Now we have the data to show what is actually going on. We can quickly increase the buying when we spot a trend or slow down when we see a decrease."

Now that business users are actively engaged, the IT staff spends just 2 hours per quarter writing reports, a dramatic freeing of resources. Before Jet Enterprise, the company had been using 127 SQL reports. Today, Kinsey's Archery is using just four SQL reports because Jet Enterprise has been able to replace the rest.

"With Jet Enterprise, we were able to make reports self-service so our non-technical people could get the reports they wanted without tying up our IT staff," said Ealy. "Jet Enterprise created a self-service portal for ad hoc reporting, as well as allowing us to build really nice, detailed sales presentations for our outside salespeople."

Kinsey's sales department is now using Jet Enterprise for metrics tracking and sharing KPIs with large corporate clients, and that's not the only department reaping the benefits. Marketing is using Jet Enterprise to explore regional buying trends, and HR is collecting and sharing metrics company-wide.

Since implementing Jet Enterprise, the company has seen revenue growth of over 32 percent.

"For a company that has been around this long and is this established, to see that kind of year-over-year growth is pretty big," commented Ealy. "We have experienced this tremendous revenue growth and I think Jet Enterprise is part of the reason why."
