

Custom Power BI Dashboards

for Microsoft Dynamics 365 Business Central

Getting information from Microsoft Business Central is can be greatly enhanced by using a top industry-ranked information analytics solution called **Microsoft Power BI**. At iCepts Technology we have leveraged Power BI's strong reporting capabilities to create useful, visual dashboards for Business Central and NAV including:

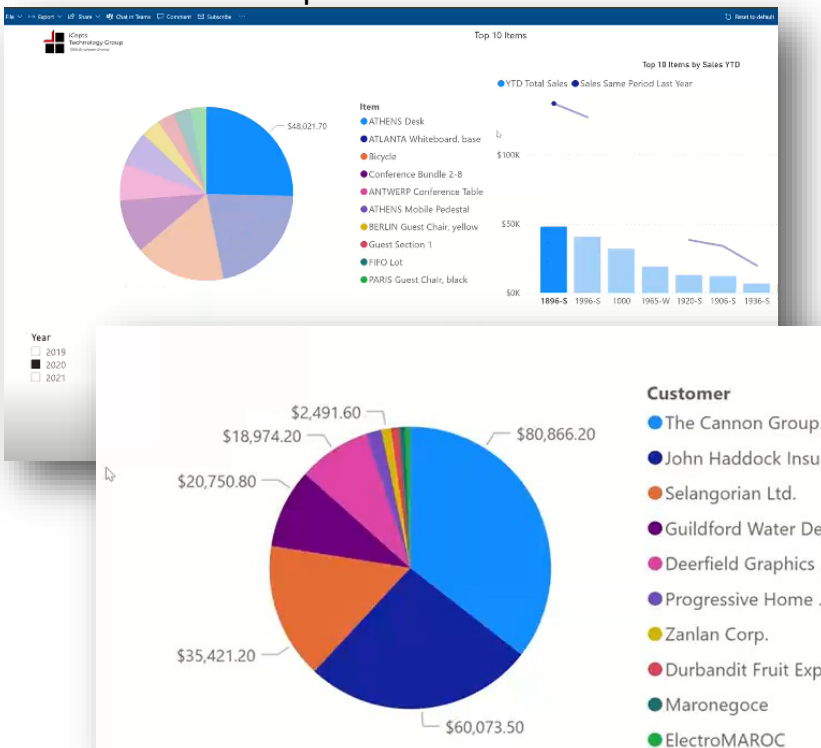

Aged Accounts Receivables: Get a detailed categorized report across your customers to display, 30, 60, 90+ data ranges for a clear view of all the outstanding invoices and see an in-depth displays of monies owed in an instant.

Aged Accounts Payables: Similar to the previous report, you can view all of the payables in a defined, or combined category, filter such as customer, days, amount, age bucket, and also drill into the invoices to support the data.

Top Customers: Quickly view your best customers, YTD, and compare to the previous year, revenue, margins, sold items and more custom filters. Find out what your most profitable items are in an easy-to-view dashboard.

Top Selling Items: Analyze performance of how items are selling and what profit margins are associated with these items, margins and by customer.

Top Vendors: Look at the vendors your purchase form and cost associated with each to compare costs with other vendors and amount spent by specified time frame.
